

Known issues and limitations:

1. Screen brightness
  - currently there is no possibilities to set Screen brightness level.
  - However, if you are using ViaGPS within Triton TotalMOD, then you can set Back light level with Triton hardware "light" button.
2. Triton Cursor Controls orientation does not change when ViaGPS is set to landscape mode.

3. Landscape/Portrait orientation

By default the ViaGPS is set to work in Landscape orientation.

If you want to change to Portrait you need to manually add one line in Ordinale.ini file :

```
[Main]
```

```
...
```

```
Portrait=1
```

```
...
```
